

# Project 3: Digital Multimeter

Lab Partners: Ryan Myers, Mihir Deshmukh

Sections: 329-01 (Deshmukh), 329-05 (Myers)

Fall Quarter

11/6/2019

Professor: Paul Hummel

## **Behavior Description**

Our device is a multimeter using a terminal for our display. Our multimeter is capable of making DC and AC measurements (Frequency,  $V_{RMS}$ ,  $V_{PP}$  for AC). Our multimeter can measure voltage signals between 0- 3.3V and frequency signals between 1Hz to 1KH with a resolution of 10mV for voltage measurements and 1Hz for frequency measurements. We use the VT100 communication protocol to communicate with our terminal. All the above measurements are printed onto the terminal as well as a bar graph with a scale for  $V_{RMS}$  and  $V_{DC}$  values with a resolution of 100mV.

## **System Specification**

System Components	TI SimpleLink LaunchPad COM-08653 Keypad DAC MCP4921
MCU	MSP432P401R
Power Supply Voltage	5V
Power Supply Type	USB
System Operating Frequency	12MHz
DAC Characteristics	12-Bit resolution output voltage (Minimum 8bits precision) 2.7V-5.5V operation 8 pins Serial input
Device Weight	.200 kg
Input Signals	Square, Sine, Sawtooth, DC voltages
Waveform Frequencies	1Hz - 1KHz
AC Voltage Ranges	0-3V
Min $V_{PP}$	0.5V
Max DC Offset	2.75V
Terminal Display and Protocol	Any serial terminal with VT100 Protocol
